Report notes

Export values are calculated using Free on Board (FOB) price.

Gross Value of Production (GVP) for annual Australian avocado production is estimated by combining: local wholesale value of fresh volume; local wholesale value of processing volume; and export value (FOB) of exported volume.

Consumer market value is estimated using average retail prices (Coles and Woolworths online price data) multiplied by Australian avocado volumes (fresh and processed) that are supplied to the Australian consumer market. The consumer market is broadly defined as both retail and foodservice channels.

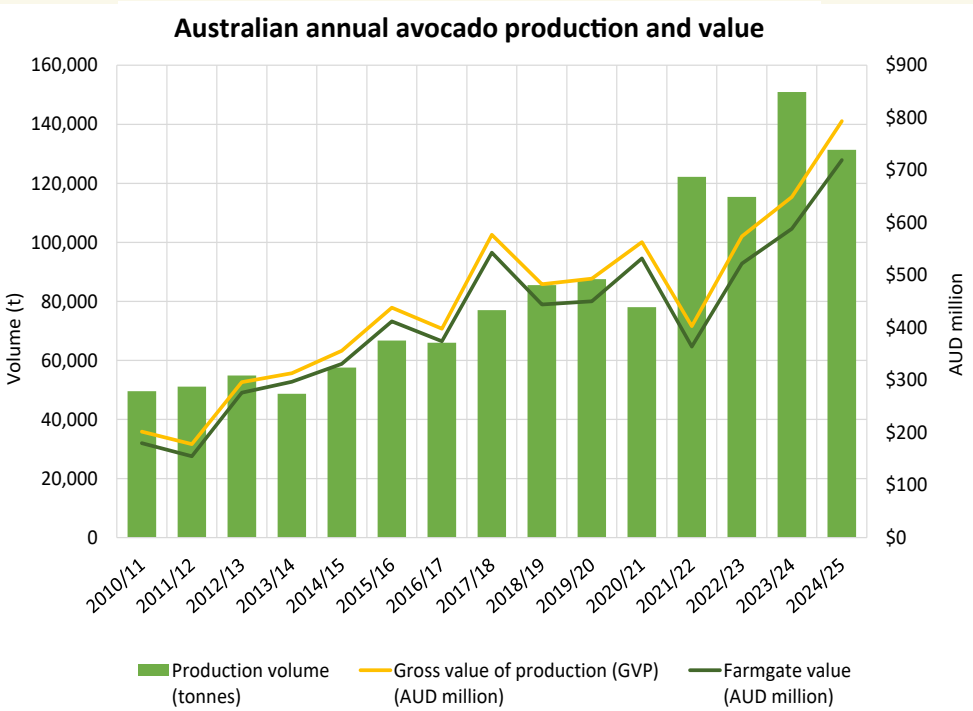

Farmgate value is estimated by multiplying the Australian avocado production volume by the local wholesale price minus estimated marketing/supply chain costs.

Australian consumption is estimated using total volume supplied to the Australian market divided by Australian population (based on ABS data).

Data source is Infocado unless otherwise stated. Infocado is the data collection platform from which avocado supply and forecast volumes are reported. The production of these reports is currently funded through AV22016. See http://www.avocado.org.au/our-programs/supply-chain-data/infocado/ for more information.

This report has been produced as part of the strategic levy investment project *Avocado industry market data capture and analysis* (AV22016), part of the Hort Innovation Avocado Fund. It is funded by Hort Innovation, using the avocado research and development levy and contributions from the Australian Government. Hort Innovation is the grower-owned, not-for-profit research and development corporation for Australian horticulture.

Avocado production and value

GVP = (fresh volume * average domestic wholesale price) + (export volume * average export price) + (processing volume * $650 / tonne).

The average domestic wholesale price is calculated by applying grade weights: Premium (69.24%), Class 1+2 (25.76%), Out of Grade (5%), as well as being weighted by fruit volume throughout the year.

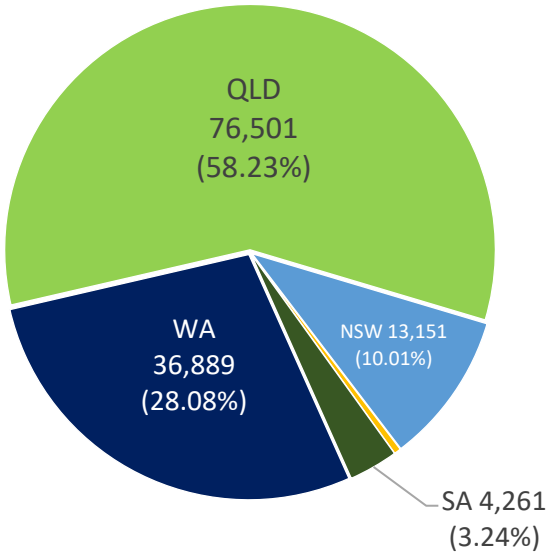

The average domestic wholesale for FY2024-25 was $6.14 / Kg.

Australian avocado production

Year	Production volume (tonnes)	Number of 5.5kg trays	Gross value of production (GVP) (AUD million)	Farmgate value (AUD million)	Consumer market value of Australian fruit sold domestically (AUD million)	Export value (AUD million)
2014/15	57,595	10,471,887	$ 356	$ 331	$ 750	$ 6.4

Avocado production by state

For FY2024-25 Queensland had its highest volume to date with over 76 thousand tonnes, representing 58% of total volume produced domestically for the year. The next largest share was from Western Australia with 28% of production.

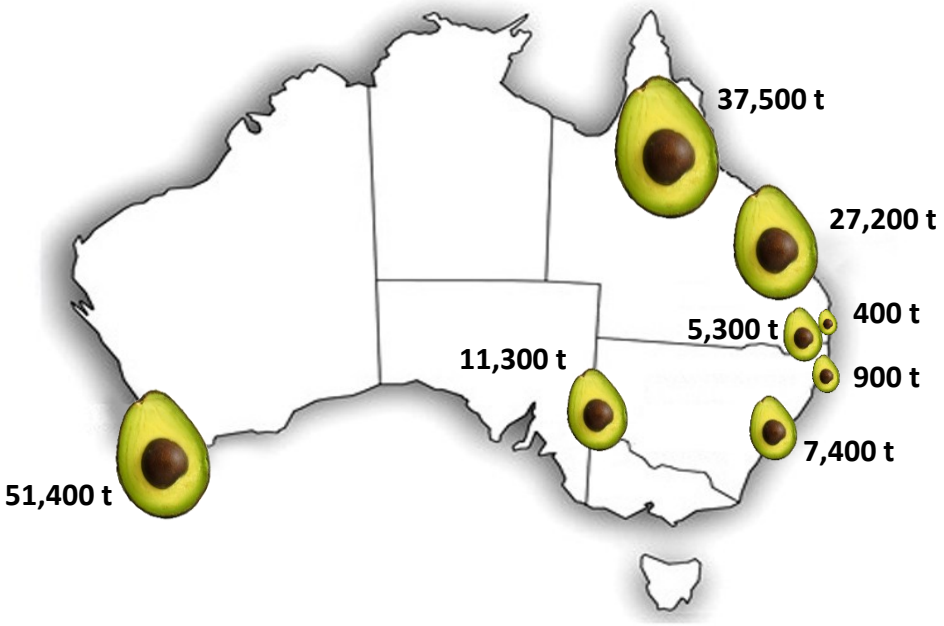

Australian avocado production by state (tonnes)

Year	Qld	NSW	Vic/Tas	SA	WA/NT	Total
2014/15	28,010	4,666	1,699	1,396	21,824	**57,595**

Avocado regions in Australia

Annual tonnes produced in each region averaged over two years*: 2023/24 and 2024/25

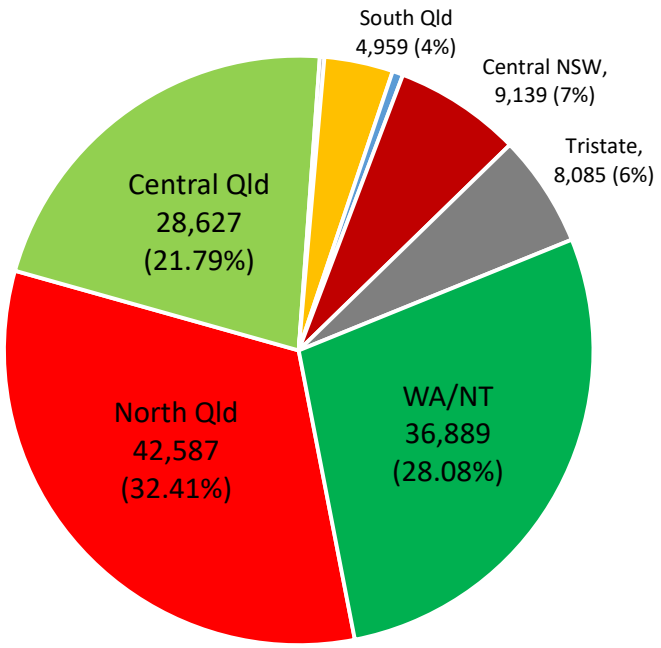

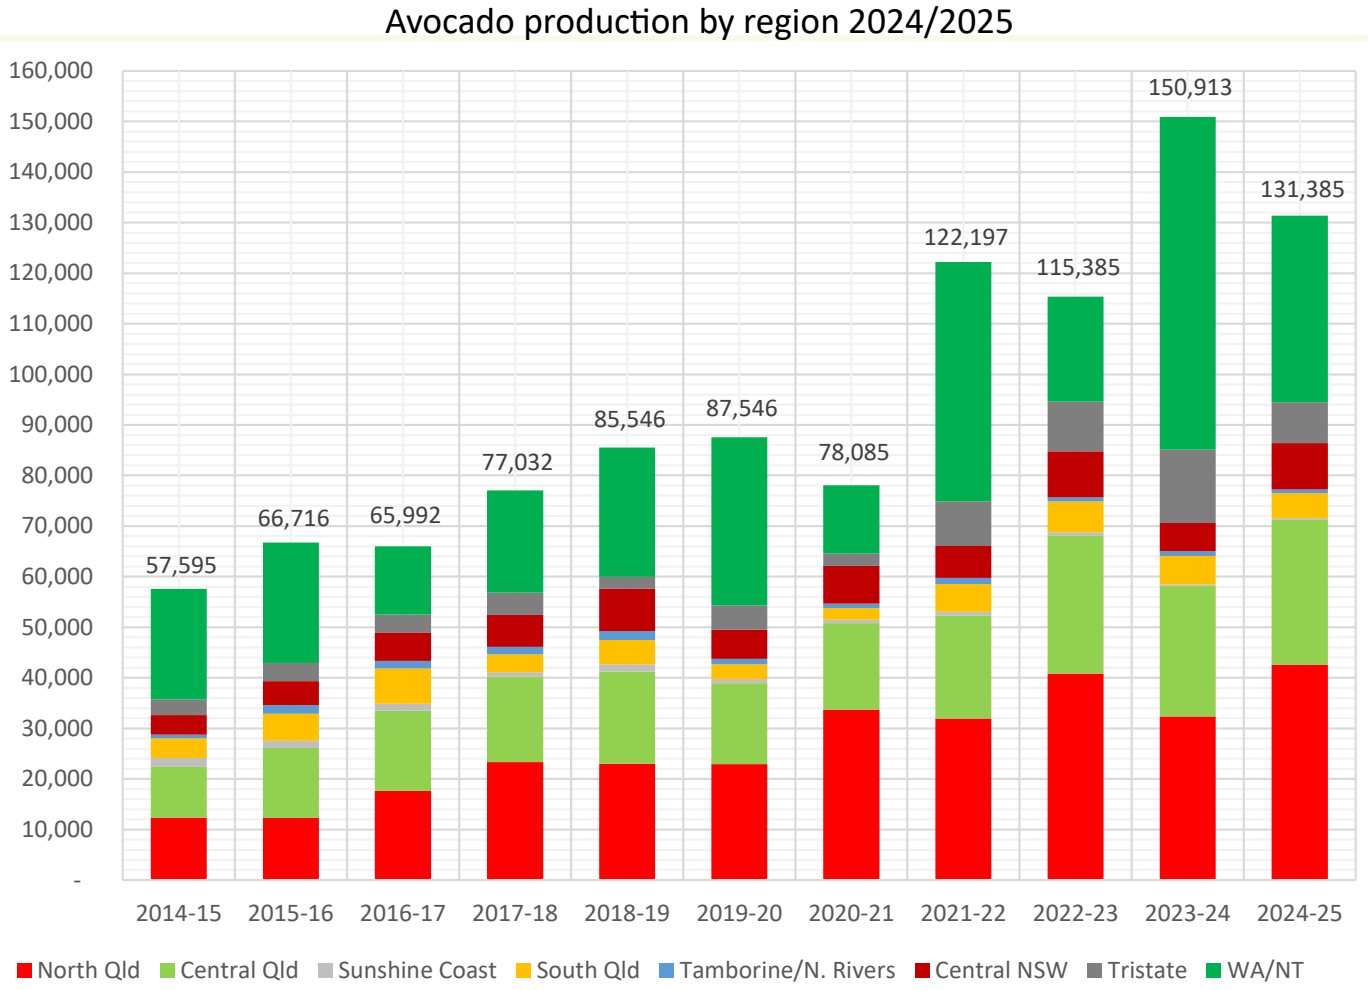

* A two-year average is used to compare production by region, because some regions have irregular bearing years, meaning crop load may vary significantly from year to year.

States	Region
Queensland	North Queensland (NQ)
	Central Queensland (CQ)
	Sunshine Coast (SC)
	South Queensland (SQ)
Queensland & New South Wales	Tamborine / Northern Rivers (TNR)
New South Wales	Central New South Wales (CNSW)
New South Wales, Victoria, South Australia & Tasmania	Tristate (Tri)
Western Australia & Northern Territory	Western Australia & Northern Territory (WA/NT)

Australia's avocado production is divided into regions which have similar growing conditions and seasons. Some regions cross state boundaries. On average across 2023/24 and 2024/25, production has mostly come from the Queensland regions (50%) and Western Australia (36%).

Avocado production by region

For FY2024/25 total production decreased by 13% respective to the previous year, from 150,913 to 131,385 tonnes.

FY2024/25 was a low season year for Western Australia. Production decreased 44% respective to the previous year.

The Queensland regions on the other hand increased 19% in total from 64,071 to 76,501 tonnes produced in this same period.

Avocado production by variety

In Australia, avocados are produced all year round due to the range of climates and conditions in our eight major avocado growing regions.

Hass is the main avocado variety, and is produced almost all year round. In 2024/25 Hass represented 80.6% of production, 1.5% lower than the previous year.

Shepard, which is harvested in Queensland, was 16.5% of total production (down 1.4%% from last year), and through late Summer and Autumn, is the dominant Australian variety on the market.

Domestic avocado consumption

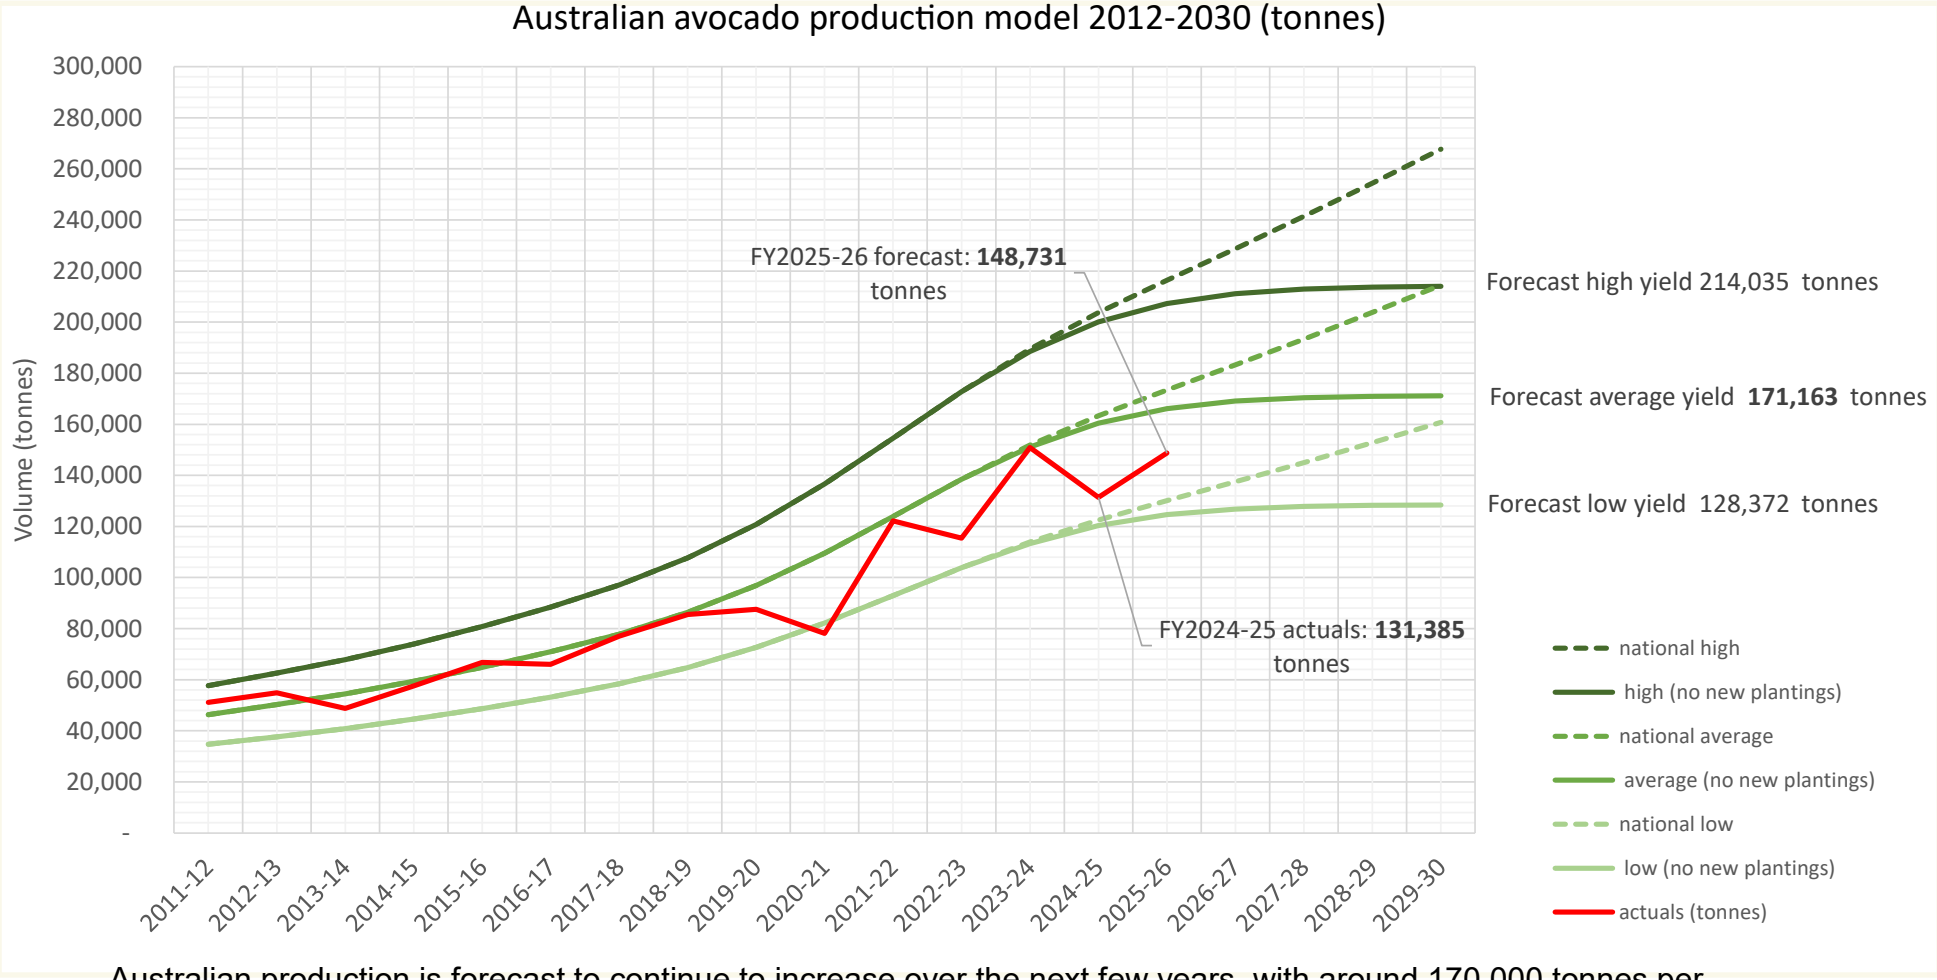

Australian annual domestic avocado supply, NZ imports and Australian per capita consumption

Australia avocado consumption in 2024/25 was 4.74 kg per person, down from 4.94 kg per person in 2023/24 due to lighter domestic supply and higher population. Imported New Zealand fruit supplements Australian supply during their harvest season during Spring and Summer.

Source: Infocado, Global Trade Atlas (S&P Global 2025), and ABS.

Australian avocado production

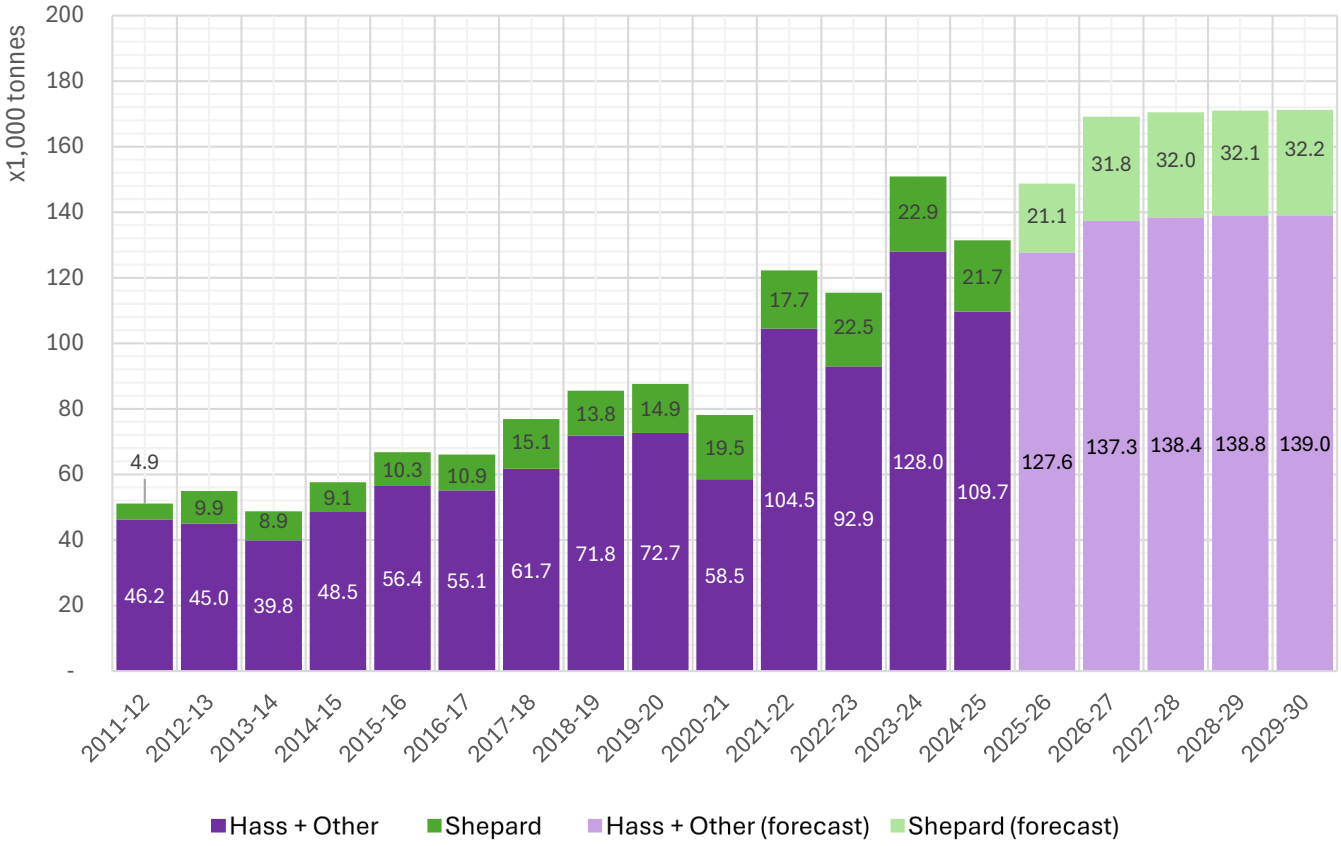

Australian production is forecast to continue to increase over the next few years, with around 170,000 tonnes per annum expected to be produced within the next 2 years. *Source: Infocado, Avocados Australia analysis.*

Australian avocado production

We have estimated that the proportion of Shepard until the year 2030 is going to be at around 19%, and Hass plus other varieties 81% of total volume.

The data displayed on this graph are actuals until FY2024-25 and forecast for FY2025-26 from the Infocado Quarterly Report. From FY2025-26 on the data is from our long term forecast model as presented on page 12 assuming an average yield and no new plantings after 2021.

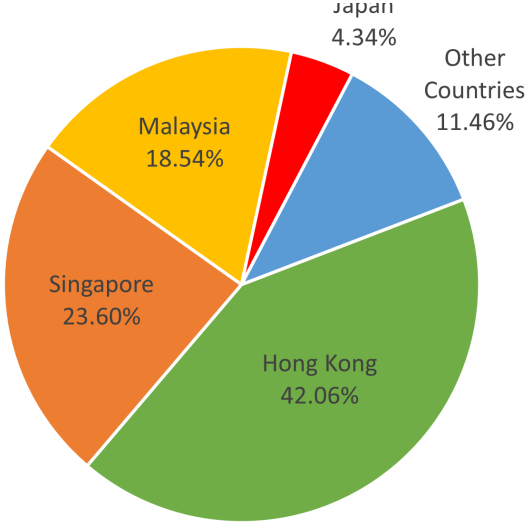

Australian avocado production model 2012-2030 (tonnes)

Australian avocado export markets

Australia's export markets in 2024/25

Australian annual avocado export volumes in tonnes by country and AU$/Kg FOB

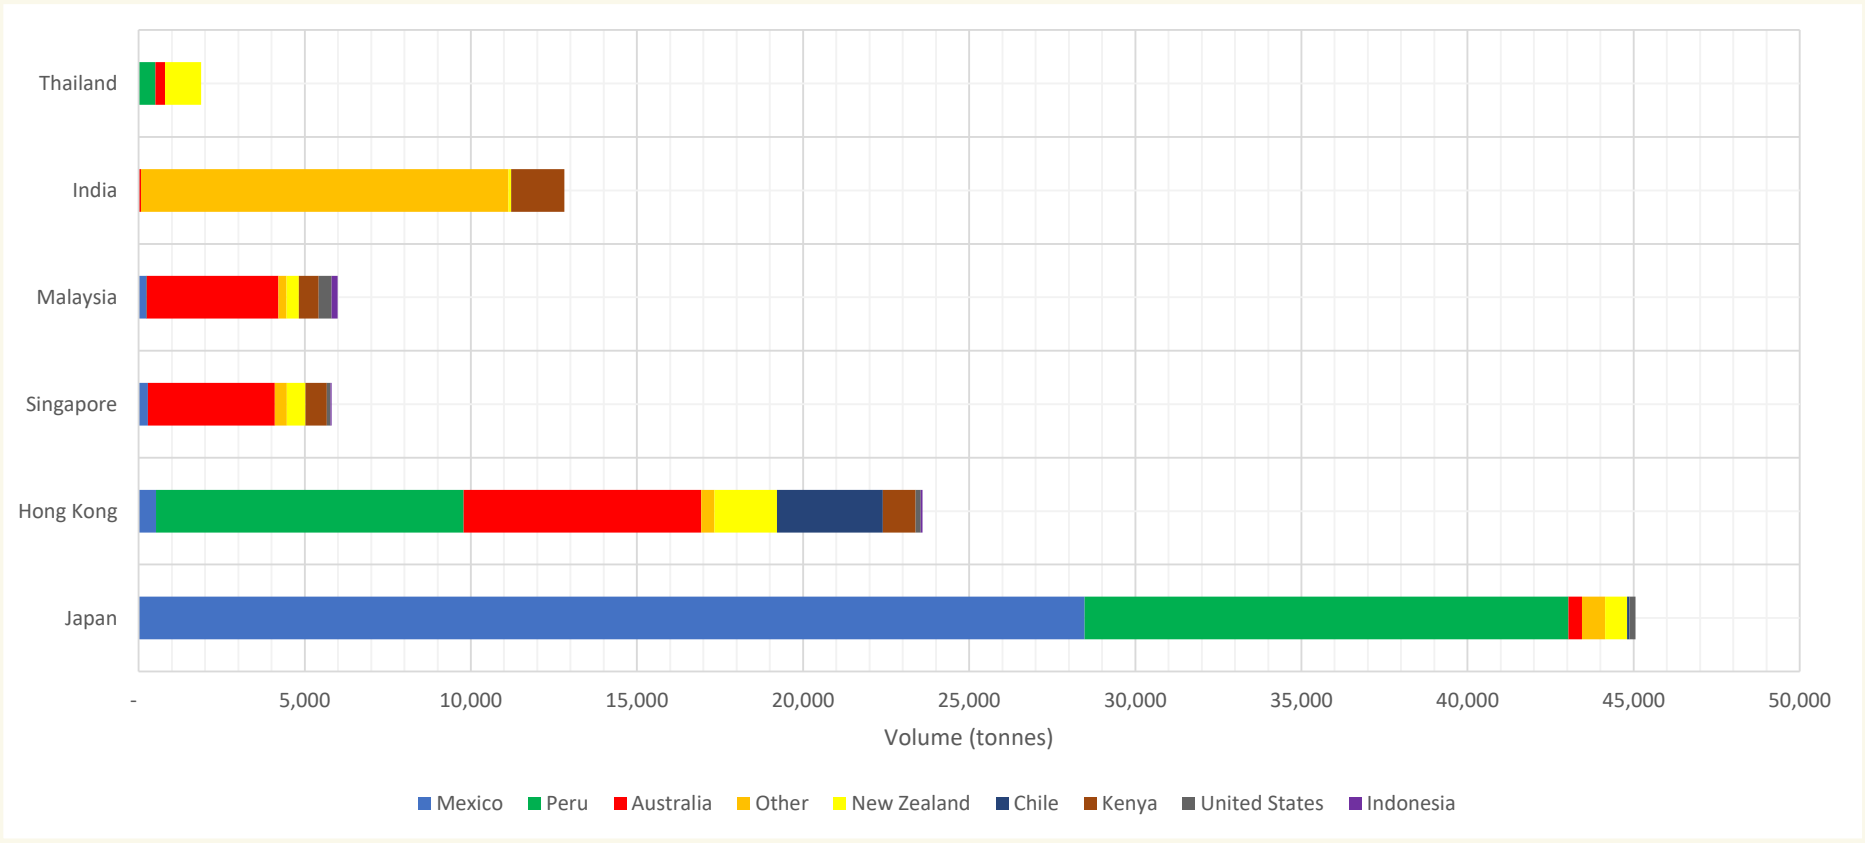

In both production and exports, Australia is currently a small player in the world avocado industry. Ongoing activity is underway targeting Australia's growth in export markets. In 2024/25 Australia exported 14,235 tonnes, representing a 35% decrease over the previous financial year, and 10.83% of the total 131,385 tonnes produced in Australia. This reduction is due to a lighter crop in 2024/25. Average export price (FOB) for the year was $6.29 / Kg.
